SMART SPRINKLER CONTROLLER

www.vyrsa.com/skydrop

Intuitive.

No PhD required.

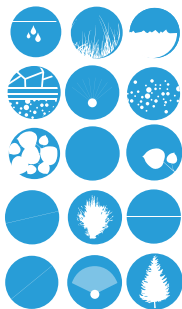

Connect to your home WiFi, then use the controller, a computer or smartphone to easily setup zones and manage your sprinklers from anywhere.

Clear icons with point and click simplicity makes each zone fully customizable in just minutes.

Controls up to 8 zones. The expansion module adds another 8 zones plus input for an external sensor.

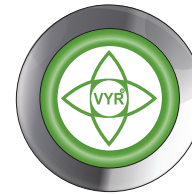

Easy to understand zone settings help water the right way with maximum conservation.

Settings for soil type, plant type, sprinkler type, shade, slope angle, and more. Simple and quick.

Intelligent.

Meteorologist

Master Gardener =

The Skydrop controller doesn't water on a set schedule with just a rain delay like regular timers and other smart controllers. It dynamically adjusts the watering frequency and duration needed for each zone.

Real-time, neighborhood level data from over 100,000 weather stations around the world help intelligently forecast when to water.

Patent pending watering algorithms use zone settings and weather data to determine which zones should be watered, and when.

Conserve.

Use up to 50% less water.*

By watering each zone separately, and only when required, up to 50% less water* can be used on landscaping.

Deep and infrequent watering promotes healthy root growth for lawns and plants.

Have watering restrictions? Just enter what days and times you're allowed to water and it will adjust automatically.

Prefer to manage things yourself? The controller can be used on a set schedule, with unlimited custom programs and start times.
